

SUPER PREMIUM FELT SUPPORT TRAY

PURPOSE: Super Premium Eaves Tray, with an extended length leg for additional protection and support. Our Felt Support Trays are made from a consistently high-quality PVC at our production facility. They are suitable for new build and remedial work and are designed to ensure that roof underlay does not drape into the gutter. This prevents water ponding behind fascias. This reduces the underlay from rotting so maintenance levels are limited.

- Prevent underlay drooping into gutter
- Prevent damage to roofing felts
- Can be cut easily and will not crack
- Can replace worn or perished roofing felts
- Prevent exposure of underlay and consequential UV degradation
